

Ahmed Zahrani Project Proposal

- **Question**

Estimate The Value of used car for companies such as rental cars companies to have a more accurate value of their fleet.

- **Data Description**

The dataset(s) I'm planing to use are ford.csv, hyundi.csv, merc.csv and, Toyota.csv. The data was obtained through Kaggle. The characteristics/features I expect to work with are year, price, transmission type, mileage, fuelType, tax, mpg and, engineSize. I will be predicting the price as my target.

- **Tools**

I intend to meet the tools requirement of the project by using NumPy, Panda and other Python tools. The other tool need will be determined after stating on Data Cleaning and EDA.

- **MVP Goal**

A Minimum Viable Product for this project could be showing the description of the data and some important graphs (determined during EDA) such Bar chart , Histogram and others.
